This book is designed to: Provide students with the tools to model, analyze and solve a wide range of engineering applications involving conduction heat transfer. Introduce students to three topics not commonly covered in conduction heat transfer textbooks: perturbation methods, heat transfer in living tissue, and microscale conduction. Take advantage of the mathematical simplicity of 0- dimensional conduction to present and explore a variety of physical situations that are of practical interest. Present textbook material in an efficient and concise manner to be covered in its entirety in a one semester graduate course. Drill students in a systematic problem solving methodology with emphasis on thought process, logic, reasoning and verification. To accomplish these objectives requires judgment and balance in the selection of topics and the level of details. Mathematical techniques are presented in simplified fashion to be used as tools in obtaining solutions. Examples are carefully selected to illustrate the application of principles and the construction of solutions. Solutions follow an orderly approach which is used in all examples. To provide consistency in solutions logic, I have prepared solutions to all problems included in the first ten chapters myself. Instructors are urged to make them available electronically rather than posting them or presenting them in class in an abridged form.

The de Havilland Tiger Moth biplane is an iconic and instantly recognisable aircraft. It is also one of a handful of planes that attracts the widest possible recognition outside the specialist group. Of nearly 10,000 built, it is thought that more than 1,000 Tiger Moths still survive over six decades on, and over half remain airworthy. They are

A non-calculus based introduction for students studying statistics, business, engineering, health sciences, social sciences, and education. It presents a thorough coverage of statistical techniques and includes numerous examples largely drawn from actual research studies. Little mathematical background is required and explanations of important concepts are based on providing intuition using illustrative figures and numerical examples. The first part shows how statistical methods are used in diverse fields in answering important questions, while part two covers descriptive statistics and considers the organisation and summarisation of data. Parts three to five cover probability, statistical inference, and more advanced statistical techniques.

From USA Today Bestselling Author Aileen Erin Seventeen-year-old Tessa McCaide has come a long way since her abrupt entrance into the world of werewolves, but she still has just as far to go before she's comfortable with turning full wolf. In the meantime, she's avoiding the topic of shifting to four legs any way she can. Thankfully her mate, Dastien Laurent, is quite the distraction. When she finds her best friend, Meredith, getting sick in the bathroom, Tessa knows something's majorly wrong. Meredith was cursed years ago, and the dark magic kept her wolf dormant only now the wolf is awake, and that same spell is killing her. Tessa has no intention of sitting around while Meredith wastes away. Even if it means playing with magic she doesn't understand, she'll do anything to save Meredith's life. Including bargaining with the local coven of witches and its crazed leader, whose only goal is getting Tessa to join the witchy ranks. Can Tessa save her friend without losing herself? ***A 52K Word Novella*** "There is no word to describe how much I love everything about this book. Feli, The Four Eyed Cat Wow! This book had the perfect balance of YA romance, sizzling chemistry, action, mystery, and heart. I devoured this book in one sitting because I couldn't put the book down! This series is officially one of my favorites. - Carrie, Goodreads hr Binge the complete Alpha Girls series now! From USA Today Bestselling Author Aileen Erin Life has been crazy since Tessa McCaide moved to Texas. She's gone from being a normal-ish girl with visions to a super-powered werewolf. She's fought off vampires and broken a nearly unbreakable curse. And she's got a hot mate, Dastien Laurent, to keep her busy. Things are looking up until the full moon ceremony rolls around. Before Tessa can strengthen her bond with Dastien, the local coven crashes the gates, demanding that Tessa—their heir apparent—be returned. If the pack wants to avoid a war with the witches, handing Tessa over is the only option. Tessa doesn't want to cause an all-out fight, but joining a dark-magic coven isn't on her to-do list, especially if embracing her magic side means parting with Dastien. When the coven leader tries to control Tessa with dark-magic, Tessa realizes she has to dismantle the coven or prepare the pack for war. Either choice will change her life—and her world—forever. "I am in complete love with this book as I have been with the series so far. It holds a magical combination of fast paced action, mystery, witty dialog, and of course the romance makes it a winner." - Eve, Functioning Insanity "So I must say, this novel is, without a doubt, wonderful. I felt like an excited Jennifer Lawrence. Happy, giddy, and slightly insane." "The Not So Public Library hr Binge the complete Alpha Girls series now!
